SLIDEPIX

# Build slides where you build everything else

A visual editor for VS Code and Cursor—with Markdown, $x^2$, media, motion, presenter view, and deterministic export.

# One file. Full control.

Markdown text and display math:

$$E = mc^2$$

```
const deck = open("demo.slidepix.json");
deck.present();
```

### Human-readable

- visual editing
- stable JSON
- relative assets
- clean diffs

**The canvas and the file stay in sync.**

# Structured data, still visual

| Capability | Canvas | Export |
| --- | --- | --- |
| Markdown + $x^2$ | Live | Exact |
| Transparent cells | Editable | Portable |
| Rows / columns | One click | Stable JSON |

**Designed on canvas**

- **centered headers**
- **transparent paint**
- **soft shape shadow**
- **Markdown cells**

**Add or remove rows and columns from Properties.**

# Media that behaves like design

Border + corner radius

Crop + four-edge fade

# Motion without rebuilding the slide

## Duplicate, move, present

A shared `morphKey` connects objects across slides. No timeline authoring is required for the movement itself.

# Motion without rebuilding the slide

## The same objects, transformed

**Position · size · rotation · opacity · radius · crop**

**Unmatched objects crossfade naturally.**

# Present. Export. Share.

SLIDEPIX

## Build slides where you build everything else

A visual editor for VS Code and Cursor—with Markdown, $x^2$, media, motion, presenter view, and deterministic export.
